

CP #1541 DECON & CHANGE ROOM

BUILDING SPECS AND FEATURES

Building Size:

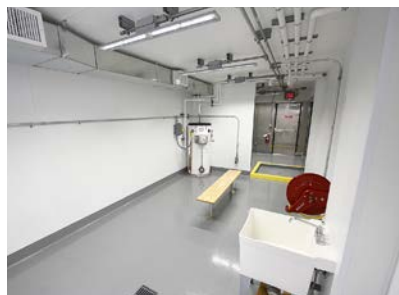

12' X 32' X 10'

Protection Level:

8psi/200ms Low Response

Building Details:

This custom application required a blast-resistant decontamination room for an alkylation unit. Separated safety zones allow occupants to pass through the "hot" zone through a permanent footbath into the "cold" safe zone. Floors are coated with a chemical-resistant epoxy and walls in the hot zone are finished with stainless steel paneling. Interior finishes are designed to withstand repeated cleanings with aggressive chemicals. Multiple gas detection systems and classified explosion-proof electrical components inside and outside were provided per customer specification.

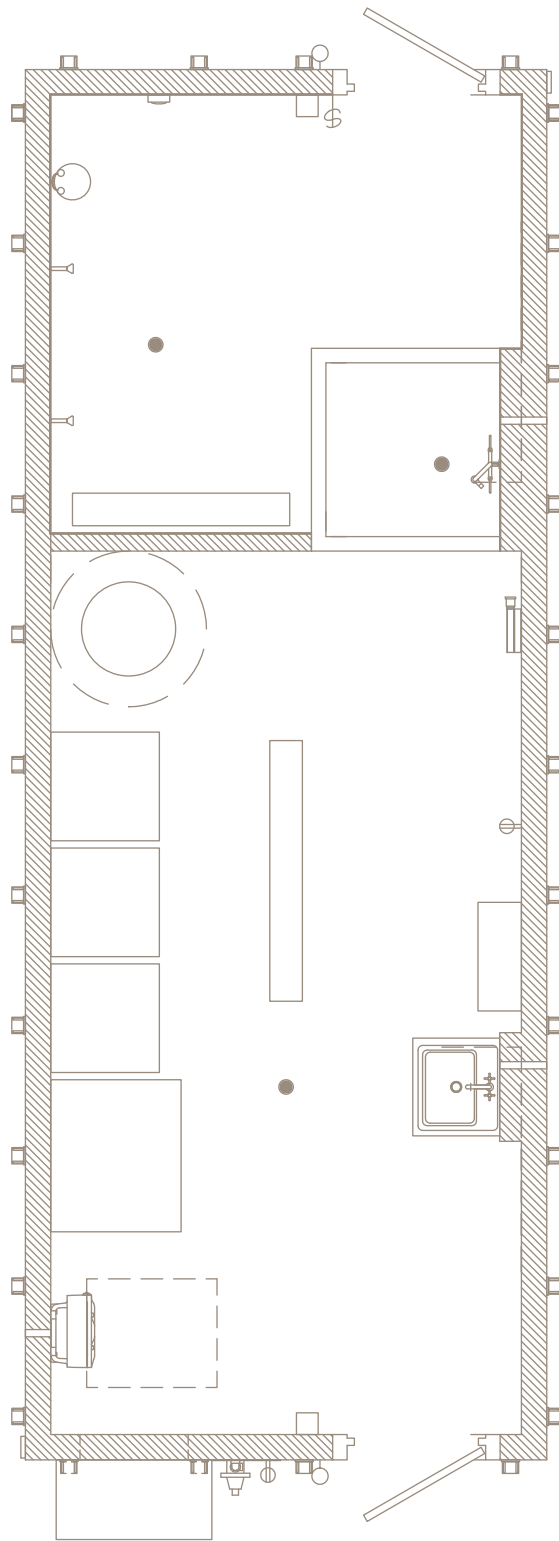

RedGuard is the leading authority in the area of modular safe space, and we are proud to have some of the world's largest corporations as our customers. While we can't always share their names, we share some of the custom projects that they have entrusted to us. We are dedicated to the concept, design, build, install and operation of blast-resistant buildings. We have earned the respect of engineers, architects, contractors, planners and other oil and gas industry specialists throughout the world.
